AND MORE**

The mobile age is here—but is your enterprise data ready to move? PointBase offers industry leading Java-based solutions for extending mission-critical enterprise data to the mobile work force. Companies around the world use these proven solutions to link field and mobile workers with back-end systems—improving productivity, reducing customer service costs and securely delivering information beyond the firewall to where it's needed most. If you are developing mobile applications to extend CRM, SFA or ERP, only PointBase brings you:

Ultra-compact, 100% Java databases for enterprise mobility

A local database on each user's mobile device—with no need for constant wireless connectivity. PointBase mobile databases enable you to:

- Extend enterprise data to your users
- Provide an embedded database that is transparent within your application—with a footprint as small as 45KB for J2ME CLDC/MIDP
- Implement your mobile strategy with true platform independence—spanning all major mobile devices, from notebooks to PDAs and beyond

Powerful, bi-directional synchronization for data-on-the-go

Enable mobile workers to synchronize only the information they need from corporate back-end systems, when it's most convenient. PointBase offers you the ability to:

- Deliver enterprise data to mobile users—via bi-directional synchronization with Oracle®, Microsoft® SQL Server™ and other JDBC-compliant databases
- Easily integrate synchronization into your overall corporate infrastructure
- Increase field productivity with access to up-to-date corporate information
